

热风烘干的热质传递过程与一维径向简化

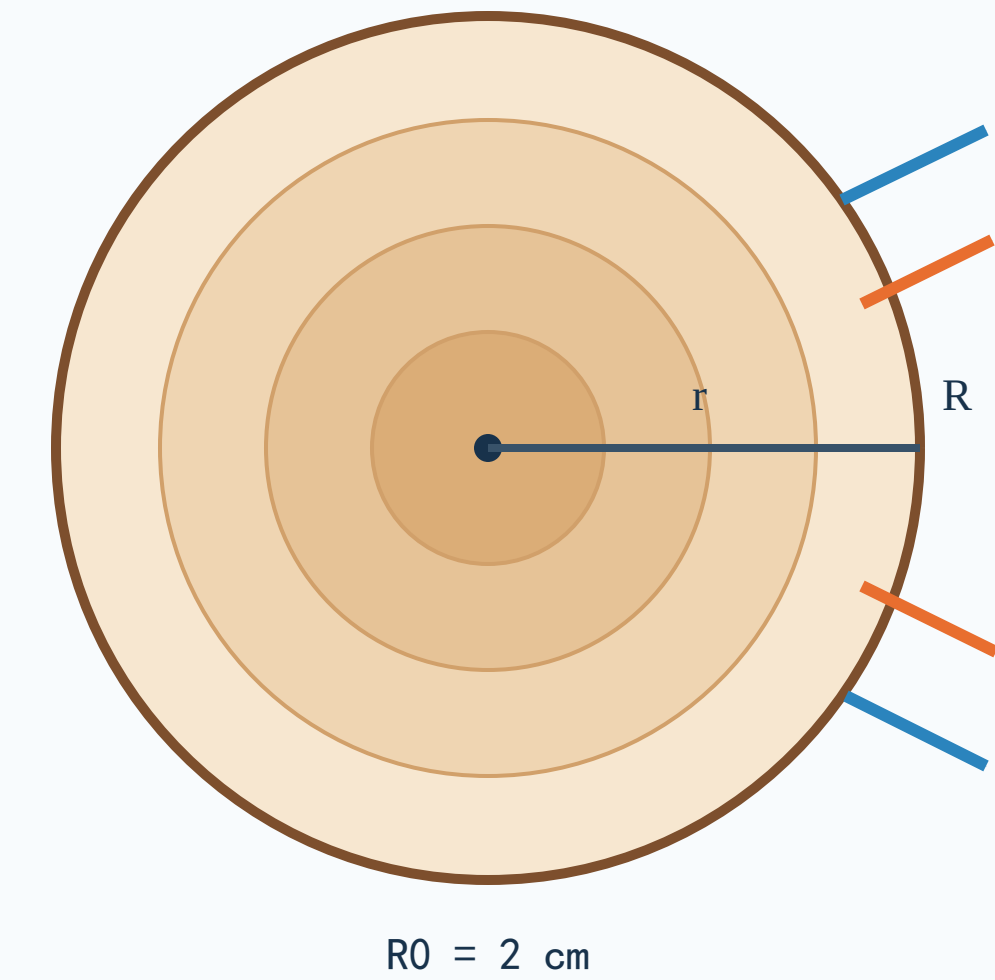

烘房侧视图

环境边界由附件 1 给出: $T_a(t)$, $C_a(t)$

侧壁采用第三类换热/传质边界: h , h_m

横截面：只保留径向梯度

轴线: $dT/dr = 0$, $dC/dr = 0$

1 轴对称

2 $T = T(r, t)$, $C = C(r, t)$

3 $L/R = 12.5$

4 端面/侧面积 = $R/L = 0.08$
